

Reflection :

Working on a project means coordinating and dividing the work in order to have the asked result.

I personally learned a lot of things from this project. Firstly, Java was a new language for the both of us. We discovered that we didn't have the same habits (position of curly brackets for example). We needed to choose in order to have the same coding style. Secondly, working together allowed me to learn some new features of co-programming. I've actually never used git before, thinking it was too difficult and complicated. Having someone explaining to me was very helpful. Moreover, after dividing the work (I worked on the dices' roll and Florian on the score grid), we could help each other when we faced a problem, ask the other his/her opinion on some part of the code. Finally, we are very pleased with the result for Part One.
